

Synthesis Vineside

Introducing a revolutionary method to control bird attack in vineyards. Synthesis Vineside is a premium grade fabric designed as side netting for vines and other fruit crops.

The benefits of using Synthesis Vineside are numerous. Capital outlay for netting is substantially reduced as there is no wasted coverage between rows and over crops. In addition, foliage in the crop canopy remains fully exposed to sunlight to optimise growing conditions.

Vineside has a square profile to deter even the smallest of birds. It is supplied with a 15 year pro-rata warranty against UV degradation.

Vineside

Colours:	White or Black
Roll widths:	0.813 m, 1.0 m (Black only) & 1.3 m (White only) (2' 6", 3' 3" (Black only), 4' 3" (White Only)
Roll length:	500 m (546¾ yds)

Synthesis Vineside EZ-10

Synthesis Vineside EZ-10 is a low-cost alternative to premium Vineside. This unique fabric, specially designed in a triangular profile, offers the fruit protection, while allowing sunlight and airflow to the canopy. Easy and quick to install, this product is supported by a 10 year pro-rata warranty against UV degradation.

Side Netting

Colours:	White or Black
Roll widths:	1 m & 1.2 m (3' 3" & 3' 11")
Roll length:	500 m (546¾ yds)

Synthesis Polytape Sidenetting

Synthesis Polytape Sidenetting is the no frills, no fuss side net with a UV-stabilised tape construction designed to provide cover for the fruiting zone on vines while leaving the canopy open. With careful application and removal, the benefit of this fabric will soon be realised.

Colour:	White
Roll widths:	1 m & 1.2 m (3' 3" & 3' 11")
Roll length:	2000 m (2187 yds)

Synthesis Viticultural Fabrics

Synthesis is a registered trademark of GALE PACIFIC

Premium fabrics for long life crop protection

Each and every product in the Synthesis range of viticultural fabrics including drape-over nets and side-nets are designed and constructed to provide optimum protection for grapevines and a host of other fruit crops for extended periods in virtually any weather conditions.

The Synthesis produced 'premium' viticultural fabrics are made using 100% UV-stabilised monofilament yarn extruded exclusively in our own factories. The use of virgin polymers and in-house extrusion processes ensures optimum quality control and ultimately guarantees a premium product for end users.

Used worldwide for 20 years, the Synthesis range of viticultural fabrics offers a complete range of bird control netting for any budget.

Synthesis Vinenet

Synthesis Vinenet is designed on the principle of providing total bird exclusion for all types of grape and other fruit crops.

Synthesis Vinenet is made from HDPE (high density polyethylene) monofilament yarn knitted to form an open mesh fabric. It is designed to deliver an optimum diamond aperture size (16 mm / 1/2"), small enough to deter smaller birds yet large enough to allow movement of bees. Shade effect is kept to an absolute minimum.

Synthesis Vinenet is remarkably cost-effective, easy to use with its coloured centre line indicator, and suitable for draping over grapevines and other fruiting crops. Growers are able to apply and remove Vinenet over large and small areas quickly and with minimal labour.

Vinenet is supplied in a knitted storage bag and carries a 15 year pro-rata warranty against UV degradation.

Colours:	White (Black available on special order)
Widths:	5 m & 6.5 m (16' 4" & 21' 3")
Length:	300 m (328 yds)

Synthesis Multivine

Synthesis Multivine is manufactured in accordance with Synthesis Vinenet specifications to provide drape-over protection against bird infestation in grapevines and other fruit crops.

Synthesis Multivine additionally features reinforced coloured indicators at both edges and at 1/4, 1/2 and 3/4 widths to enable netting to be placed evenly over crops.

For ease of handling and storage, Synthesis Multivine is supplied in its own bale bag. Multivine carries a 15 year pro-rata warranty against UV degradation.

Colours:	White (Black available on special order)
Widths:	10 m, 13 m, 15 m, 18 m & 20 m (32'9", 42'7", 49'2", 59', 65'7")
Length:	300 m (328 yds)* *custom lengths available on request

Synthesis Hexnet

Synthesis Hexnet features a hexagonal aperture specially designed to be placed directly over the plant to protect fruit from bird attack during ripening. Synthesis Hexnet is available on special order only and features coloured indicators at either edge and at 1/4, 1/2 and 3/4 intervals. Its nominal fabric mass is higher than Vinenet or Multivine, and it is supplied in bales. Hexnet carries a 15 year pro-rata warranty against UV degradation.

Colours:	White (Black available on special order)
Widths:	6.5 m, 10 m, 13 m, 15 m, 18 m (21' 3", 32' 8", 42' 7", 49' 2", 59')
Length:	300 m (328 yds)
