DISCOVER THE ADVANTAGES OF SYNTHESIS HANDYSCREEN® BUILT TOUGH TO PERFORM BETTER

Synthesis Handyscreen is a light weight knitted shade fabric designed especially for installation over tunnel houses.

Synthesis Handyscreen reduces stress on precious vegetables, plants and flowers by lowering temperatures within the tunnel house. As a result, Synthesis Handyscreen eliminates the need for painting glass houses and promotes even light distribution to encourage and enhance plant growth.

These qualities make Synthesis Handyscreen the premium choice for economical tunnel and glass house protection.

EASILY INSTALLED PROTECTIVE INSULATION

Installed as a cover for tunnel houses, Synthesis Handyscreen protects the polyethylene skin from UV degradation, wind and hail.

Synthesis Handyscreen also provides extra insulation for heated tunnel houses, thus reducing energy and maintenance costs. This impressive fabric is easily removed and stored for use in subsequent seasons.

TECHNICAL SPECIFICATIONS

Yarn:	UV stabilised High Density Polyethylene
Construction:	Tape
Pattern:	Lock-stitch knitted
Mass:	80/70 gsm
Roll width:	3.66 m
Roll length:	300 m

MADE IN AUSTRALIA

BCA GPL466 HanScr

Manufactured from UV stabilised High Density Polyethylene, Synthesis Handyscreen won't suffer from excessive sun damage, rot or absorb moisture.

Available in two shade factors allowing the grower to select the required balance of sun protection vs light transmission, Synthesis Handyscreen's lock-stitch construction won't fray if torn or cut. This makes Synthesis Handyscreen an extremely economical choice for all hot houses, green houses and other ultra-light duty shade applications.

SYNTHESIS HANDYSCREEN HAS QUALITY COVERED

Manufactured in Australia to meet extreme weather conditions, Synthesis Handyscreen meets international quality standards while giving maximum quality and performance. Its open-stitch construction offers an optimum blend of shade and photo synthetically active light transmission to encourage the growth of plant life.
